Brain Imaging – one of the most enabling applications of GRINTECH micro optics

Endomicroscopy using GRINTECH lenses and assemblies allows an *in-vivo* imaging access to deep tissue regions in the brain, especially in non-humans. It helps to understand disease formation and progression on a cellular level of the tissue.

To support our customers even better by providing appropriate biological techniques and protocols, GRINTECH has created a partnership with **Inscopix** Inc. in Palo Alto, California, one of the leading technology providers in neuroscience microscopic imaging.

Inscopix is distributing our products in the field of non-confocal, single photon epi-fluorescence imaging for neuroscience applications in non-humans since 2015 exclusively.
