

GRIN Objective Lenses for Endoscopy

- Gradient index lenses for endoscopic imaging optics
- Non-toxic silver-based glass material, view angle $\vartheta = \pm 30^\circ$
- Plane surfaces, low chromatic aberration
- Combination with prisms and beam splitter cubes on request
- Aperture and field stops (black chromium coating ring on lens surface generated by photolithography) on request
- Certification: Biological safety – toxicology (EN ISO 10993-1)

Order example: GT-IFRL-100-010-50-CC
 | | | | |
 | | | | | Coating Code
 | | | | | NA: 0.5
 | | | | | Working distance: 10 mm
 | | | | | Diameter: 1.0 mm
 | | | | | Imaging Focusing Rod Lens
 GRINTECH

- Working distance and lens length deviating from these standards can also be produced
- ZEMAX files can be [DOWNLOADED](#) from our website

¹ Design Wavelength 570 nm

GRINTECH Objective lenses are available with AR coatings (R < 0.5 % for the design wavelength and incidence angles of 0 ... 30° corresponding to measurements on a reference substrate)

Coating Code: NC: no coating (reflection loss approx. 12 %)
 C1: AR coating for VIS on both sides

Variations due to modifications of the production process are possible. It is the user's responsibility to determine suitability for the user's purpose.

Note: GRINTECH objective lenses can be combined with GRIN relay lenses to complete endoscopic imaging systems by gluing the optical surfaces directly together. Prisms to change the direction of view can also be glued directly on the front surface of the objective lens. We are happy to advise you.

Please note our partnership with Inscopix as our exclusive distributor for the field of non-confocal, single photon epi-fluorescence imaging for neuroscience applications in non-humans (see page 10).

Tolerances:
 lens length z_i: ± 5% due to variations of the gradient constant
 diameter d: + 0 / -0.01 mm
 Please ask for tighter diameter tolerances

Surface quality:
 5 / 3 x 0.025; L 3 x 0.005; E 0 (defined by DIN ISO 10110-7:2000-02).
 The surface quality is defined within 90 % of the lens diameter. Outside of this area defects are allowed.

Brain Imaging – one of the most enabling applications of GRINTECH micro-optics

Endomicroscopy using GRINTECH lenses and assemblies allows an *in-vivo* imaging access to deep tissue regions in the brain, especially in non-humans. It helps to understand disease formation and progression on a cellular level of the tissue.

To support our customers even better by providing appropriate biological techniques and protocols, GRINTECH has created a partnership with **Inscopix** Inc. in Palo Alto, California, one of the leading technology providers in neuroscience microscopic imaging.

Beginning on December 1st, 2015 **Inscopix** will distribute exclusively our products in the field of non-confocal, single photon epi-fluorescence imaging for neuroscience applications in non-humans.
